

4096 BIT (1024 × 4 BITS) STATIC RAM

DESCRIPTION The NEC μPD2114L is a 4096 bit static Random Access Memory organized as 1024 words by 4 bits using N-channel Silicon-gate MOS technology. It uses fully DC stable (static) circuitry throughout, in both the array and the decoding. It therefore requires no clocks or refreshing to operate and simplifies system design. The data is read out nondestructively and has the same polarity as the input data. Common input/output pins are provided.

The μPD2114L is designed for memory applications where high performance, low cost, large bit storage, and simple interfacing are important design objectives. The μPD2114L is placed in an 18-pin package for the highest possible density.

It is directly TTL compatible in all respects: inputs, outputs, and a single +5V supply. A separate Chip Select (\overline{CS}) lead allows easy selection of an individual package when outputs are OR-Tied.

FEATURES

- Access Time: Selection from 150-450 ns
- Single +5 Volt Supply
- Directly TTL Compatible – All Inputs and Outputs
- Completely Static – No Clock or Timing Strobe Required
- Low Operating Power – Typically 0.06 mW/Bit
- Identical Cycle and Access Times
- Common Data Input and Output using Three-State Output
- High Density 18-pin Plastic and Ceramic Packages
- Replacement for 2114L and Equivalent Devices

PIN CONFIGURATION

PIN NAMES

A ₀ -A ₉	Address Inputs
\overline{WE}	Write Enable
\overline{CS}	Chip Select
I/O ₁ -I/O ₄	Data Input/Output
VCC	Power (+5V)
GND	Ground

Rev/2

Operating Temperature -10°C to +80°C
 Storage Temperature -65°C to +150°C
 Voltage on any Pin -0.5 to 7 Volts ①

ABSOLUTE MAXIMUM RATINGS*

Note: ① With respect to ground.

T_a = 25°C

*COMMENT: Stress above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

T_a = 0°C to 70°C; V_{CC} = +5V ± 10% unless otherwise noted.

DC CHARACTERISTICS

PARAMETER	SYMBOL	LIMITS			UNIT	TEST CONDITIONS
		MIN	TYP	MAX		
Input Load Current (All Input Pins)	I _{LI}			10	μA	V _{IN} = 0 to 5.5V
I/O Leakage Current	I _{LO}			10	μA	\overline{CS} = 2V, V _{I/O} = 0.4V to V _{CC}
Power Supply Current	I _{CC1}			65	mA	V _{IN} = 5.5V, I _{I/O} = 0 mA, T _a = 25°C
Power Supply Current	I _{CC2}			70	mA	V _{IN} = 5.5V, I _{I/O} = 0 mA, T _a = 0°C
Input Low Voltage	V _{IL}	-3.0		0.8	V	
Input High Voltage	V _{IH}	2.0		6.0	V	
Output Low Current	I _{OL}	3.2			mA	V _{OL} = 0.4V
Output High Current	I _{OH}			-1.0	mA	V _{OH} = 2.4V, V _{CC} = 4.75V
						V _{OH} = 2.2V, V _{CC} = 4.5V

T_a = 25°C; f = 1.0 MHz

CAPACITANCE

PARAMETER	SYMBOL	LIMITS			UNIT	TEST CONDITIONS
		MIN	TYP	MAX		
Input/Output Capacitance	C _{I/O}			8	pf	V _{I/O} = 0V
Input Capacitance	C _{IN}			5	pf	V _{IN} = 0V

AC CHARACTERISTICS

T_a = 0°C to +70°C; V_{CC} = +5V ± 10%, unless otherwise noted.

3

TIMING WAVEFORMS

- Notes: ① \overline{WE} is high for Read Cycle
 ② t_W is measured from the latter of \overline{CS} or \overline{WE} going low to the earlier of \overline{CS} or \overline{WE} going high.

Fast Page Mode Read Modify Write Cycle

Remark In the fast page mode, read, write and read modify write cycles are available for each of the consecutive CAS cycles within the same RAS cycle.

Fast Page Mode Byte Read Modify Write Cycle

- Remarks**
1. In the fast page mode, read, write and read modify write cycles are available for each of the consecutive \overline{CAS} cycles within the same \overline{RAS} cycle.
 2. This cycle can be used to control either \overline{UCAS} or \overline{LCAS} only. Or, it can be used to control \overline{UCAS} or \overline{LCAS} simultaneously, or at random.

CAS Before RAS Self Refresh Cycle (Only for the μPD42S18160)

Remark Address, \overline{WE} , \overline{OE} : Don't care L I/O, U I/O: Hi-Z

Cautions on Use of CAS Before RAS Self Refresh

CAS before RAS self refresh can be used independently when used in combination with distributed CAS before RAS long refresh; However, when used in combination with burst CAS before RAS long refresh or with long RAS only refresh (both distributed and burst), the following cautions must be observed.

(1) Normal Combined Use of CAS Before RAS Self Refresh and Burst CAS Before RAS Long Refresh

When CAS before RAS self refresh and burst CAS before RAS long refresh are used in combination, please perform CAS before RAS refresh as follows just before and after setting CAS before RAS self refresh.

μPD42S18160: 1,024 times within a 16 ms interval

(2) Normal Combined Use of CAS Before RAS Self Refresh and Long RAS Only Refresh

When CAS before RAS self refresh and RAS only refresh are used in combination, please perform RAS only refresh as follows just before and after setting CAS before RAS self refresh.

μPD42S18160: 1,024 times within a 16 ms interval

(3) If $t_{RASS(MIN.)}$ is not satisfied at the beginning of CAS before RAS self refresh cycles ($t_{RAS} < 100 \mu s$), CAS before RAS refresh cycles will be executed one time.

If $10 \mu s < t_{RAS} < 100 \mu s$, RAS precharge time for CAS before RAS self refresh (t_{RPS}) is applied. And refresh cycles as follows should be met.

μPD42S18160: 1,024 times within a 128 ms interval

For details, please refer to **How to use DRAM User's Manual**.
